Executive Summary

Information provided in this report focuses on the economic importance of the livestock sector in Deuel County, Nebraska (Deuel County). The first part of the report reviews agriculture data from the 2002 Census of Agriculture. These data provide information on the importance of agriculture and the livestock sector in Deuel County. The second part of the report analyzes the direct, indirect, and total economic impacts associated with livestock operations in Deuel County. This analysis utilizes an IMPLAN input-output (I-O) database and model developed specifically for Deuel County.

Livestock and Agricultural Production in Deuel County, Nebraska

The 2002 Census of Agriculture provides data showing the importance of agriculture and the livestock sector in Deuel County. The data presented in the chart indicate the market value of agricultural products sold in Deuel County totaled \$29.6 million in 2002. Considering the per farm value of agricultural products sold, Deuel County's average of \$117,484 ranked 73rd among Nebraska's 93 counties and was 59.8 percent of the state per farm average of \$196,609.

Note: Parts may not sum to totals due to rounding.

The average market value of agricultural products sold per acre is shown in the current chart and includes the data for Deuel County and for the leading five counties in terms of this measure, along with the Nebraska data. Deuel County, with a value of \$100.70, ranks 74th among the Nebraska counties in terms of the market value of agriculture products per acre, with \$51.80 of that amount accounted for by livestock and livestock products.

Note: Parts may not sum to totals due to rounding.

Deuel County's per acre average for all agricultural products is 47.6 percent of the state per acre average of \$211.40.

Data provided in this report indicate that livestock and livestock products are a significant source of income for Deuel County farmers. The per farm market value of livestock and livestock products sold averaged \$60,460 (51.5 percent of the total market value of all agricultural products sold) for Deuel County, ranking the county 72nd among the Nebraska counties in terms of this measure. The average Deuel County per farm value for livestock and livestock products sold was 47.2 percent of the average per farm value of \$127,959 for Nebraska as a whole.

Economic Impacts Associated with Livestock Production in Deuel County, Nebraska

The second part of the report provides an assessment of the positive employment and other economic effects associated with the production of livestock and livestock products in Deuel County. The analysis utilizes an IMPLAN input-output (I-O) model developed for Deuel County. The major positive employment and other economic effects associated with the production of livestock and livestock products are summarized in the continuing portion of the Executive Summary.

- Total Output Effects: The total value of output directly associated with sales to final demand by the livestock sector in Deuel County is estimated to be \$13.4 million. When the secondary output effects (indirect and induced output) are added, the total output effects associated with the production of livestock and livestock products in Deuel County are estimated to be \$20.4 million. Of this total, 76.5 percent (\$15.6 million) is accounted for by output (direct, indirect, and induced) produced by the livestock sector and the indirect and induced effects in other sectors represent an additional \$4.9 million of output.

Livestock Sector Economic Impacts in Deuel County

*Note: Impact components may not sum to total due to rounding.
Source: Computed from IMPLAN Input-Output Model for Deuel County, 2006 data.

Livestock Sector Economic Impacts in Deuel County Employment Impacts

Source: Computed from IMPLAN Input-Output Model for Deuel County, 2006 data.

- Employment Effects: There are an estimated 75 individuals employed in the Deuel County livestock products sector producing the output dedicated to sales to final demand (\$13.4 million). When the indirect and induced employment effects are included, employment in the livestock sector is estimated to be 87 workers (and proprietors). The other secondary employment effects (indirect and induced effects in sectors other

than livestock and livestock products) account for an additional 54 employees that support livestock production. When the indirect and induced effects for all sectors are included, the estimated Deuel County employment supporting the production of livestock is estimated to be 141 workers.

– **Value-Added Effects:** The value-added effects associated with livestock production in Deuel County provide a good measure of the economic value associated with this sector. Value-added consists of payments to the factors of production within the local economy and includes payments to labor, proprietors’ income, other property income, and indirect business taxes. As the information and analysis provided in this report indicate, the total value-added effects associated with the production of livestock and livestock products in Deuel County are estimated to be \$4.5 million. Of this amount, \$1.7 million represents value-added in the livestock products sector itself and \$2.8 million is value-added in other economic sectors supporting the production of livestock and livestock products in Deuel County.

Source: Computed from IMPLAN Input-Output Model for Deuel County, 2006 data.

Livestock-Related Impacts Not Analyzed

The analysis discussed in this report considers the backward-linkages associated with livestock production in Deuel County. That is, the analysis has considered impacts associated with economic sectors providing inputs to support livestock production. The analysis has not considered the “stemming from” effects, or the economic impacts associated with those industry sectors with forward linkages from the livestock production sector. The obvious sector in this regard would be food processing activities utilizing meat products as an input. Obviously, the food and meat processing industry creates a very substantial amount of additional employment and economic activity in Nebraska and in many Nebraska counties, suggesting the contributions of the livestock industry may be significantly greater than reported in this analysis if these forward-linkages were considered.

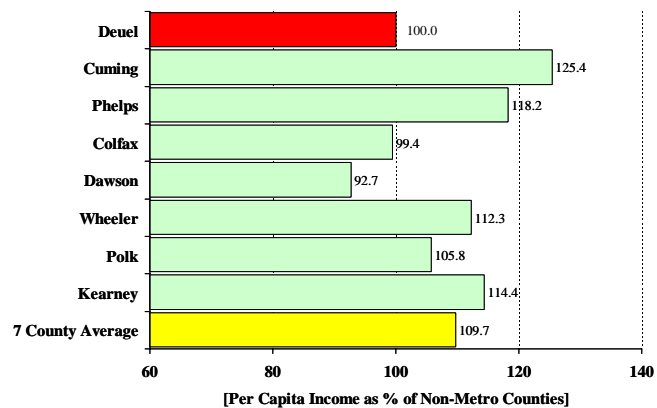

Livestock Production and Economic Well Being

A key question about the importance of the livestock industry concerns its contributions to the economic well being of residents of Deuel County and other Nebraska counties where the production of livestock and livestock products may be even more significant as a contributor to the overall level of economic activity. Data presented in this report provide some insights into the relationship between livestock production and economic well being, measured in terms of per capita personal income.

Per capita personal income in Cuming County, which is the leading county in Nebraska in terms of the production of livestock and livestock products, was 10.7 percent more than the average per capita personal income for all non-metropolitan, Nebraska counties for the year 2005. For the ten-year period from 1996 to 2005, the average per capita personal income in Cuming County was 25.4 percent more than the average for the non-metropolitan areas of Nebraska. In the case of Deuel County, which ranked 73rd among the Nebraska counties in terms of livestock and livestock products sold per acre, per capita income for the ten-year period from 1996 to 2005 was \$24,086. This per capita income level was equal to the average per capita income level for all non-metropolitan Nebraska counties for the ten-year review period. Per capita personal income for Deuel County in 2005 was \$27,489 or 1.3 percent below the average per capita income level for all non-metropolitan Nebraska counties.

For the top seven Nebraska livestock counties, in terms of the average value of livestock and livestock products sold per acre, the ten-year (1996-2005) average per capita personal income was 9.7 percent more than for all non-metropolitan counties. The per-capita personal income for the leading livestock counties in 2005 was 3.7 percent more than for all non-metropolitan counties.

Livestock Production and Property Taxes

Livestock production activity contributes in a significant and positive manner to the tax base and to tax revenues needed to support local schools and other local public services. The per acre assessed valuation of agricultural property (other than agricultural land) was

Per Acre Assessed Valuation for the Agriculture Sector*, Deuel County, Non-Metro Area and Leading Livestock Counties

* Note: Excludes agriculture land
 ** Per acre values for the leading seven livestock counties
 Source: See Table Seven

\$292.28 for the leading seven Nebraska livestock counties, 99.5 percent more than the \$146.48 of per acre assessed valuation for all non-metropolitan counties in the state. In the case of Deuel County, the per acre assessed valuation of agricultural property (except agricultural land) was \$77.53. This value was 47.1 percent less than the per acre assessed value of the same class of property for all non-metropolitan counties.

Local tax revenues are also significantly enhanced by the presence of livestock production activity. As this chart illustrates, per acre taxes levied on agricultural property (other than agricultural land) were \$4.86 for the seven leading Nebraska livestock counties. This level of per acre tax revenues was \$2.46, or 102.5 percent more than per acre tax revenues for the same class of agricultural property for all non-metropolitan Nebraska counties. In the case of Deuel County, the per acre taxes levied on this class of agricultural property were \$1.42 or 40.8 percent less than per acre taxes levied for all non-metropolitan counties.

Economic Importance of and Economic Impacts Associated with Livestock Production in Deuel County, Nebraska

Information provided in this report focuses on the importance of the livestock sector to the economy of Deuel County, Nebraska (Deuel County). The first part of the report reviews agriculture data from the *2002 Census of Agriculture*. These data provide insights into the importance of agriculture and the livestock sector in Deuel County. The second part of the report analyzes the secondary economic impacts associated with livestock production in Deuel County. This analysis utilizes an IMPLAN input-output (I-O) database and model developed specifically for Deuel County.

Livestock and Agricultural Production in Deuel County, Nebraska

The *2002 Census of Agriculture* provides data showing the importance of agriculture and the livestock sector for Deuel County. The data presented in Table One include the data for Deuel County, along with data for Nebraska and selected Nebraska counties. The market value of agricultural products sold in Deuel County was \$29.6 million in 2002. This level of sales of agricultural products ranked Deuel County 80th among the Nebraska counties in terms of this measure. In terms of the per farm value of agricultural products sold, Deuel County's average of \$117,484 ranked 73rd among the counties and was 59.8 percent of the Nebraska per farm average of \$196,609.

The data reporting the market value of agricultural products sold may be somewhat misleading as these data are affected by the geographic size of the county (number of farms and acres). For example, while Lincoln and Custer counties rank 4th and 5th in terms of the total market value of agricultural products, their high ranking results, in part, from the relatively large size of these counties. When the data are normalized for the size of the county, these counties do not maintain their high rankings. For example, using the average market value of agricultural products sold per acre, Lincoln County ranks 50th and Custer County ranks 51st among Nebraska's 93 counties.

The average market value of agricultural products sold per acre is shown in the current chart and includes the data for Deuel County and for the top five Nebraska counties in terms of this measure, along with the Nebraska data. These data are also shown in Table One. In terms of the market value of agriculture products sold per acre, Deuel County, with a value of \$100.7, ranks 74th among Nebraska's 93 counties. Deuel County's per acre average for all agricultural products is 47.6 percent of the Nebraska per acre average of \$211.40.

Data presented in Table One indicate that livestock and livestock products are an important source of income for Deuel County farmers. The per farm market value of livestock and livestock products sold averaged \$60,460 for Deuel County, ranking the county 72nd among Nebraska's 93 counties in terms of this measure. The market value of livestock products sold in Deuel County accounted for 51.5 percent of the total market value of all agricultural products sold, compared to 65.1 percent for Nebraska. The average Deuel County per farm value (for livestock and livestock products sold) was 47.2 percent of the average per farm value of \$127,959 for Nebraska.

Table One also provides data reporting the number of farms; land in farms; farm employment; estimated market value of land and buildings; estimated market value of machinery and equipment; and net cash farm income of farm operations for Deuel County, selected other Nebraska counties, and Nebraska.

Economic Impacts Associated with Livestock Production in Deuel County, Nebraska

Information presented in the continuing portion of this report focuses on the economic impacts associated with livestock operations in Deuel County. This analysis utilizes an IMPLAN economic input-output (I-O) model developed specifically for Deuel County.

From the Deuel County I-O model, economic multipliers are derived that quantify the level or magnitude of economic activity necessary to support the production activity of local livestock enterprises. As such, the input-output analysis identifies and quantifies economic linkages associated with the inputs required in order for the livestock sector to produce the level of output it has achieved (backward linkages). The model does not evaluate forward linkages. That is, the model does not provide a measure of additional (downstream) processing made possible by the production of the livestock output, although this is certainly an important factor for Nebraska and for many Nebraska counties.

To provide a basic understanding of the structure and size of the agricultural sector within Deuel County, data in Table One provide basic information from the *2002 Census of Agriculture* describing production activity and other parameters for the farm sector.

The IMPLAN database and input-output model provide further insight into the value of production of livestock and livestock products in Deuel County. The data in Table Two present estimates of the value of production for the livestock sector reported by the IMPLAN database and I-O model for Deuel County for 2006. As the data in Table Two show, the total value of output for livestock and livestock products was reported to be \$15.555 million dollars for 2006 (compared to the \$15.2 million market value of livestock and livestock products sold reported by the *2002 Census of Agriculture*).

The data in Table Two also provide a further disaggregation of livestock and livestock products. As reported in Table Two, cattle ranching and farming (which includes cow-calf operations and cattle feeding) was reported to have a value of production of \$14.952 million for the year 2006. Other animal production activities, except cattle and poultry, had an estimated output value of \$0.065 million in 2006; while poultry and egg production in Deuel County was reported to be \$0.538 million.

Table Two
Agricultural Sector Parameters, Deuel County IMPLAN Database, 2006

Industry	Industry Output	Employment	Employee Compensation	Proprietor Income	Other Property Income	Total Value Added
	(Million \$)	(Number)	(Million \$)	(Million \$)	(Million \$)	(Million \$)

Source: Minnesota IMPLAN Group, Inc., IMPLAN Input-Output Model and database for Deuel County (2006 data).

The data presented in Table Two show the most significant livestock sector is the beef-producing sector, accounting for 96.2 percent of the total production of livestock and livestock products in Deuel County in 2006. Moreover, the beef-producing sector accounted for 85 of the 87 total reported employees in the livestock-producing sector and accounted for 87.7 percent of the value added by the livestock and livestock products sector.

Economic Impact Analysis

The economic linkages and impacts associated with livestock operations in Deuel County are analyzed in the balance of this report. The analysis utilizes an input-output model developed for Deuel County, for which the livestock producing sectors have been collapsed (aggregated) into one sector (livestock and livestock products). This involves aggregating the two livestock sectors shown in Table Two into one livestock sector. The analysis then focuses on the economic impacts associated with the production of livestock and livestock products in Deuel County. This analysis involves identifying the multiplier effects associated with this production sector, where the multiplier effects evaluated include the output multiplier, the employment multiplier, and the value-added multiplier.

Each of the multipliers, in turn, consists of three components: the direct effect, the indirect effect, and the induced effect. The output multiplier defines (quantifies) the change in total output for the economy, which is associated with the delivery of an additional unit (dollar) of output of livestock and livestock products to final demand.

The multipliers specified for the livestock sector recognize that changes in output (increases in sales to final demand) by this sector will require additional inputs from other businesses or economic sectors be provided. The industries or economic sectors supplying additional inputs to the livestock sector will find they also must purchase additional inputs in order to expand their output to supply the increased inputs demanded by the livestock enterprises. As the increased demand for goods and services associated with the initial increase in sales to final demand works itself through the sectors of the economy, these effects are collected and termed the indirect effects component of each of the economic multipliers.

The induced component of the economic multipliers follows from the increased personal income (payments to households) in Deuel County resulting from the increase in the demand for labor, both with respect to the direct and indirect economic effects. That is, as output is increased by the livestock products sector (direct effect) and in the economic sectors that supply the additional inputs to the livestock sector (indirect effects), these sectors will add labor inputs and increase their payments to labor. The translation of the additional household incomes into additional expenditures for (consumer) goods and services is referred to as the induced effects. The three effects--direct, indirect, and induced--together represent the total economic impacts embodied in the multipliers utilized to measure the economic impacts associated with the subject livestock enterprises.

The estimated direct, indirect, and induced components of the economic multipliers associated with the production of livestock and livestock products in Deuel County are provided in Table Three. The three economic multipliers for which values are reported include the output, value-added, and employment multipliers. The output multiplier indicates that for each dollar of sales to final demand by the livestock sector in Deuel County, there will be an estimated increase in total economic output of \$1.5287 for the Deuel County economy.

Table Three
Input-Output Multipliers for the Livestock & Livestock Products Sector,
Deuel County

Multiplier Component	Total		
	Total Output ^(a)	Value Added ^(b)	Total Employment ^(c)
Direct	1.0000	0.1098	5.6080
Indirect	0.4678	0.1895	3.9878
Induced	0.0609	0.0398	0.9538
Total	1.5287	0.3391	10.5496
Multiplier ^(d)	1.5287	3.0883	1.8812

^(a) Increase in output for each dollar of sales to final demand.

^(b) Change in value added for each dollar of sales to final demand.

^(c) Total jobs created per million dollars of sales to final demand.

^(d) Multiplier values equal the total effects divided by the direct effect.

Source: Minnesota IMPLAN Group, Inc., IMPLAN Input-Output Model for Deuel County, 2006 data.

The value-added multiplier estimates there will be total payments to the factors of production of \$0.3391 for each dollar of sales of livestock and livestock products to final demand. This total value-added effect includes the direct effect of \$0.1098 associated with the initial sales of one dollar of output to final demand, \$0.1895 of payment to the factors of production associated with the increase in output (sales) for the intermediate (supplying) sectors, and the induced effect of \$0.0398 related to the increased household demand for goods and services resulting from the increased payment to labor (household income). The value-added multiplier of 3.0883 indicates for each dollar of value-added in the livestock and livestock products sector, we would expect to see approximately \$2.09 of additional value-added in other sectors of the Deuel County economy.

The employment multiplier indicates for each \$1,000,000 of sales to final demand by the livestock and livestock products sector, there will be a total of 10.5496 jobs supported, including the direct, indirect, and induced components of the employment multiplier. Moreover, the employment multiplier of 1.8812 indicates that for each 100 workers employed in the livestock and livestock products sector, we would expect to find 88 workers employed in other sectors which support livestock production in Deuel County.

Table Four provides a summary of the economic effects associated with the production of livestock and livestock products in Deuel County. As the information provided in this table is reviewed, it will be of interest to note the estimated sales to final demand by the livestock sector are presented in the table as the direct effects (output, employment, and value-added). For example, the direct output (value of production) associated with sales of livestock and livestock products to the final demand sector by Deuel County livestock producers is estimated to be \$13.4 million. From the Deuel County I-O model, we estimate that for the Deuel County livestock sector to sell this amount of output to final demand, it would need to produce a total of \$15.6 million of total output, as approximately 14.0 percent (\$2.2 million) of the total output would represent intermediate sales (sales by one producer in the livestock sector to other producers in the same sector).

Table Four
Summary of Output, Employment and Value-Added Effects
Associated with the Livestock Products Sector in Deuel County, Nebraska
(Annual Estimates, 2006)

Total Value-Added Effects	\$1,708,000	\$2,827,000	\$4,536,000

Source: Computed from the IMPLAN Input-Output Model for Deuel County (2006 data).

-Output Effects

A review of the data presented in Table Four indicates the total output effects (including the direct, indirect, and induced output) associated with the production of livestock and livestock products in Deuel County are estimated to be \$20.4 million. Of this total, 76.5 percent (\$15.6 million) is accounted for by output (direct, indirect, and induced) produced by the livestock sector and the indirect and induced effects in other Deuel County economic sectors represent an additional \$4.9 million of output.

-Employment Effects

There are an estimated 75 people employed in the livestock products sector to produce the output dedicated to sales to final demand (\$13.4 million); when the indirect and

induced effects are included, the estimated employment in the livestock sector increases to 87 people. The other secondary employment effects (indirect and induced effects in sectors other than livestock and livestock products), account for an additional 54 jobs and total employment in Deuel County supporting the production of livestock and livestock products is estimated to be 141 employees.

-Value-Added Effects

The value-added effects associated with the livestock production in Deuel County provide a measure of the economic value associated with this sector. Value-added consists of payments to the factors of production within the economy and includes payments to labor, proprietors' income, other property income, and indirect business taxes. As the data in Table Four show, the total value-added effects related to the production of livestock and livestock products in Deuel County are estimated to be \$4.5 million. Of this amount, \$1.7 million is value-added in the livestock products sector itself and an estimated \$2.8 million is value-added in other economic sectors that results because of the additional economic activity in these other economic sectors required to support the production of livestock and livestock products in Deuel County.

Table Five provides additional detail describing the economic effects associated with the production of livestock and livestock products in Deuel County. The data in the table identify the business or economic sectors that are the primary beneficiaries of the economic activity resulting from livestock production in Deuel County. Shown in the table is a list of the economic and business sectors likely to be positively impacted by the production of livestock products. The impacts presented in the table include the predicted output, value-added, and employment impacts for each of the sectors associated with the production and sales to final demand of the output produced by the livestock sector in Deuel County.

Table Five
Distribution of Livestock Production Economic Impacts, by Selected Economic Sector^(a),
Deuel County Nebraska, 2006

^(a) The business or economic sectors impacted by the production of \$13,374,000 of livestock and livestock products for sales to final demand in Deuel County (2006).

Source: Computed from the IMPLAN Input-Output Model for Deuel County (2006 data).

Livestock Production and Economic Well Being

Data presented in Table Six provide further insight into the importance of livestock production activities as a contributing factor to economic well being for selected livestock production counties. Included in the table are data showing the average per acre value of livestock and livestock products sold for Deuel County and for the leading livestock counties, according to this metric. Also included in the table are data showing per capita personal income for the counties, as a percent of per capita personal income for all non-metropolitan counties. The per capita personal income index data are included for two time periods. First the income index data are included for 2005. Also, recognizing the volatility of year-to-year changes in total personal and per capita personal income, especially in rural counties, an average per capita personal income index measure is included for a ten-year period, 1996-2005.

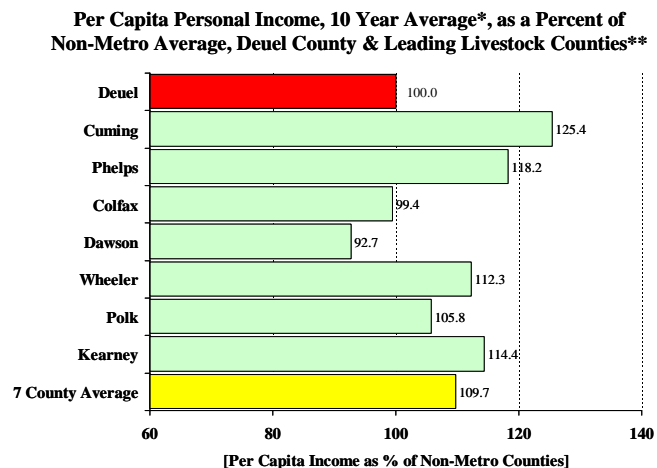

Table Six
Livestock Production and Per Capita Personal Income,
Deuel County and Leading Nebraska Livestock Counties

County/Nebraska	Livestock & Livestock Products Per Acre		Per Capita Income (% of Non-Metro Counties)	
	Value (\$)	County Rank	2005	10 Yr Avg. (1996-2005)
Deuel	51.80	73	98.7	100.0
NEBRASKA	137.60	N/A	118.3	116.5
Cuming	1,434.40	1	110.7	125.4
Phelps	693.10	2	114.3	118.2

Average for Top Seven Livestock Counties			103.7	109.7

Source: USDA, National Agricultural Statistics Service, *2002 Census of Agriculture*, and U.S. Bureau of Economic Analysis (BEA), County Personal Income, 1996-2005.

As the data shown in Table Six and the accompanying chart indicate, per capita personal income for 2005 in Cuming County, the leading county in Nebraska in terms of the production of livestock and livestock products, was 10.7 percent more than the average per capita personal income for all non-metropolitan counties. For the ten-year period from 1996 to 2005, the average per capita personal income in Cuming County was 25.4 percent more than the average for the non-metropolitan areas of Nebraska. In the case of Deuel County, which ranked 73rd among the Nebraska counties in terms of livestock sold per acre, average per capita income for the ten-year period, from 1996 to 2005, was \$24,086. This per capita income level equal to the average per capita income level for all non-metropolitan counties for the 1996-2005 period. In 2005, per capita personal income for Deuel County was \$27,489, or 1.3 percent less than the average per capita income level for all non-metropolitan counties.

The data presented in the table and the accompanying chart also show that, for the top seven livestock counties, the ten-year (1996-2005) average per capita personal income was 9.7 percent more than for all non-metropolitan counties. In 2005, per capita personal income in the leading livestock counties was 3.7 percent more than for all non-metropolitan counties.

* 10 Year Average (1996-2005).

Livestock Production and Property Taxes

As the data presented in Table Seven show, livestock production activity contributes in a significant and positive manner to the tax base and to tax revenues needed to support local schools and other local public services. Part A of the table indicates the per acre assessed valuation of agricultural property (other than agricultural land) was \$292.28 for the leading seven livestock counties, 99.5 percent more than the \$146.8 of per acre assessed valuation for all non-metropolitan counties in the state. In the case of Deuel County, the per acre assessed valuation of agricultural property (except agricultural land) was \$77.53. This value was 47.1% percent of the per acre assessed value of the same class of property for all non-metropolitan counties.

Table Seven
Agricultural Property Valuation and Taxes Levied Per Acre, Deuel County,
Non-Metropolitan Nebraska, and Leading Nebraska Livestock Counties

Part A -- Per Acre Assessed Valuation					
County/ Nebraska	Ag. Outbuildings & Farmsite	Ag. Personal Property	Ag. Dwelling & Homesite	Ag. Land	Total Ag.
DEUEL	16.09	21.71	39.73	276.08	353.61

Wheeler	65.22	27.94	21.26	481.04	595.46
Polk	95.88	94.32	223.02	1,664.75	2,077.97
Kearney	49.18	93.94	99.69	1,106.53	1,349.34
Average for Top 7 Livestock Counties	78.41	85.80	128.07	1,118.51	1,410.79

Part B -- Per Acre Taxes Levied					
County/Nebraska	Ag. Outbuildings & Farmsite	Ag. Personal Property	Ag. Dwelling & Homesite	Ag. Land	Total Ag.
DEUEL	\$0.29	\$0.42	\$0.71	\$4.85	\$6.27
Non-Metro Area*	0.56	0.67	1.17	2.39	4.79
Cuming	2.16	1.91	2.52	24.15	30.74
Phelps	1.29	1.95	1.51	18.23	22.98
Colfax	2.08	1.58	4.03	26.52	34.21
Dawson	0.66	1.22	1.81	13.63	17.32
Wheeler	0.87	0.33	0.28	6.13	7.61
Polk	1.46	1.48	2.87	23.84	29.65
Kearney	0.98	1.62	3.25	18.42	24.27
Average for Top 7 Livestock Counties	\$1.26	\$1.42	\$2.18	\$17.75	\$22.61

* Non-Metro Area includes Nebraska except Cass, Douglas, Lancaster, Sarpy, and Washington Counties.

Source: Special tabulation provided by the Nebraska Department of Property Assessment & Taxation.

Part B of Table Seven also illustrates that local tax revenues are significantly enhanced by the presence of livestock production activity. These data show the per acre taxes levied on agricultural property (other than agricultural land) were \$4.86 for the top seven livestock counties. This level of per farm tax revenues was \$2.46, or 102.5 percent more than per acre tax revenues for the same class of agricultural property for all non-metropolitan counties. In the case of Deuel County, per acre taxes levied on this class of

agricultural property were \$1.42, or 40.8 percent less than the average per acre tax levied for all non-metropolitan areas.
