

# Nebraska Biosciences

NEBRASKA

Good Life. Great Opportunity.

DEPT. OF ECONOMIC DEVELOPMENT

## TAKE A LOOK

Nebraska's bioscience industry has national recognition in the following sectors:

- Animal Health
- Drugs and Pharmaceuticals
- Medical Devices and Equipment
- Renewable Fuels and Chemicals
- Research, Testing, and Medical Laboratories

Nebraska is the second largest state in biofuels production. Bio-refineries have the capability to produce a diverse slate of bio-chemicals, protein and fiber products used in medical, pharmaceutical, health, food and feed applications. Bio-refineries in 25 Nebraska communities are ideally suited for co-location of bio-product processing ventures.

Nebraska is home to production facilities for Zoetis, Merck Animal Health, Cargill, Becton Dickinson, GSK, and Novozymes. The above, combined with Nebraska's major medical centers in Omaha, the University of Nebraska bioscience research centers in Lincoln, and two technology parks, make Nebraska an appealing place for the life sciences community to do business.
